

❖ **Topic : communication Problem :**

Situation : In the U.K.G class 2-4 students are not completing their homework and 1-2 of them are very introvert, 2-4 lack of parents effort.

❖ **Efforts Taken :** Talked to parent personally approached about the child's problem with a positive attitude, highlighting the child's strengths first. A friendly tone and open discussion helped reduce the parent hesitation. The teacher assured that the school's goal was to support and criticize.

❖ **Success :** A positive change was observed in the child as well as parent now he is taken it seriously and a very positive results comes.

❖ **Results :** Based on the questionnaire, it was found that they are giving more time to their kids which is more required at this age..

❖ **Conclusion :** This research concludes that overcoming barriers to parental communication is essential for a child's holistic growth.

❖ **Suggestions :**

- Conduct awareness sessions on the importance of parental involvement.
- Parent should give the time to their children.
- Parent should maintain a positive attitude during discussions.

Topic : “Study of creativity and thinking power of children”

Riddhi Prajapati
(Assistant Teacher)

❖ **Introduction :**

Creativity is a unique power in human life. Through creativity, a person can develop new ideas, solutions to problems and imaginative vision. The progress made in the field of science, technology, art, literature and education is based on creative ideas.

Sometimes this lack of confidence, things like traditional thinking, criticism, etc. become obstacles in the development of creativity. Therefore, it is necessary that creativity is encouraged from children to youth and the factors that suppress it are removed.

❖ **Why did you choose the topic? How did you do it?**

I chose this topic because I saw different problems in my classroom with children. Such as letter recognition, recognition of objects and counting them. So I decided that I would make the children have fun and learn a lot of joy through different experiments.

❖ **Analysis of information :**

In the research process, analysis of information, comparison of results, verification of sources, deciding whether to take it from experts or certified publications, verification of information with the advice of experts.

❖ **Results :** After doing all activates ,I get the result that- Writing letterss and-80%,Ball counting activity-85%,Recognizing English letters-94%,G.k.animal identification- 85%,Colour identification- 80%

❖ **Observation :** The observation of this subject is that teaching subjects to children through activities can become a learning experience. If they are involved in different activities, they can learn better.

❖ **Conclusions :** Study in creativity and thinking power. The conclusion of this subject can be that if children are taught through different experiments, children can study with great joy, while some children are interested in studying with new activities.
