

❖ **Suggestions for future research...**

- 1) Conduct longitudinal studies to understand the development of children's creativity and thinking skills
- 2) Compare the effects of educational methods and measure their impact on creativity
- 3) Investigate whether technology such as AI is effective in increasing children's thinking skills
- 4) Conduct subject-based studies to find out how subjects such as art, science, language, and mathematics contribute to developing creativity and thinking skills
- 5) Conduct research to develop assessment tools and prepare objective and scientific tools
- 6) Study how children's creativity and thinking skills are linked to future careers and life skills

Topic : Children imitate the behavior of their parent. Problem and solution.

Mrs. Hina Girishbhai Parmar
(Pre-Primary English medium)

❖ **Introduction :** Children by observing and imitating the actions of people around them, especially their parents. Parents are the first and the last influential role models in a child's life. When parents display positive habits like honesty, kindness, and discipline, children tend to adopt these values. However, if parents show negative behaviors such as anger, dishonesty, or addiction, and children may copy these as well. This imitation can lead to behavioral problems and affect the child's development. Therefore, it is important to identify these problems and find effective solutions to guide children toward positive behavior.

❖ **Purpose of Choosing this topic :**

The purpose of choosing this topic is to understand how parents 'behavior influences their children's actions and character development. Since children learn mainly through observation and imitation, it is important to study the impact of both good and bad parental habits. By exploring this topic, we can make parents aware of their role as role models encourage them to create a positive home environment. This study also aims to suggest ways to prevent children from adopting negative behaviors and promote healthy moral and social growth.

❖ **Results :** Based on the survey questionnaire, it was found the most parents are satisfied with teacher's personal attention to their kids. They said that how much their action affect their children. Many parents become more careful about their behavior at home and started practicing good habits in front of their kids. They appreciate the awareness activities and shared that their children are now showing better manners, respect and discipline.

❖ **Conclusion :** Some students engaged in bad habits, showing anger, fighting while very small students quickly learn what they see around them. From this study it is cleared that parent have a strong influence on their children's behavior and personality. Children learn from what they see than from what they are told. Therefore, parents should always try to be good role models by showing positive habits like honesty, patience, kindness.

When parents set a good example, children naturally grow into well behaved and responsible individual.

❖ **Suggestions :**

1. Parents should show their willingness to improve themselves.
2. Encouragement and guidance attract towards good behavior.
