

## Topic : Study of students creativity

- Sarika Rai  
(Assistant Teacher)

### ❖ Introduction :

**Creativity** is the ability to see the world not just as it is, but as it could be- to imagine to question and to build some things new from the familiar.

### ❖ Interpretation of Creativity

Every child is born with creative imagination and it is their superpower. “Creativity is the art of seeing the invisible and making it visible”. When you create you express your heart without using words. Creativity is intelligence having fun.

### ❖ Why and how I choose the topic Creativity

I chose the creativity subject because it helps me express my ideas, thoughts, and imagination in unique ways. Creativity allows me to think differently, solve problems, and explore new possibilities.

### ❖ Analysis of information

It is a standardized test in which students are asked to complete a picture, suggest unusual uses of a picture, or ask questions and make inferences based on a given picture. The creative thinking skills of students reassessed through this test.

### ❖ Conclusion and Result

Creative the world needs your ideas. Creativity is limitless -So are you. Every idea is a new beginning create inspire, repeat. Your imagination is your superpower. Creativity makes the world more beautiful. Creativity is a spark that light mind .Turning hidden dreams the world can find. A Single idea can start a stream creativity make reality from a dream.

### ❖ Suggestion for future research

To develop creativity and research skills in students, encourage them to think about problems in different ways and find solutions. Providing constructive feedback is one of the easiest ways to encourage creative thinking. This can be easy to overlook. Avoid teaching from subject-area boxes as much as possible. Math box, social studies box, etc.

## Topic : Study of Physical health of students of Std. 4 to 8

Moin Raj  
(Assistant Teacher)

### ❖ Introduction :

Physical education is education, but the medium of education in physical education is physical creative activities. Many people consider physical education as physical education and many people consider jumping, jumping, exercising and other games as physical education. Many people consider this subject as a means of entertainment, but physical education is an educational process of achieving all-round development of children through activities. The physical and mental development of children occurs at this age, making them aware of their body, getting them out of bad habits, improving their physical and mental health, developing cooperation for each other, sportsmanship and social spirit.

### ❖ Why and how to choose the topic ?

For the past few years, we all know that we and every child have been influenced by mobile, TV and social media. At this age, which is known as adolescence, many physical and mental changes occur in children. At this age, hormonal growth is developing very rapidly. There are many changes
