

in their roots. At this age, in a way, they can be said to behave like raw clay of a pot. If they are not given the right mold at this age, then going forward they prove to be very harmful to themselves, their family and society. It is necessary to take care that they are not inspired to do any bad company or other violent activities.

❖ **Analysis of the data :**

In this regard, by obtaining information from various categories, evaluating them based on their performance. By analyzing them in various categories, their shortcomings or mistakes were found out like lack of skills in the particular game.

❖ **Results :**

After examining all the above, soon the children improved their shortcomings and gained new confidence and vitality. Children who were indifferent towards sports also joined the sport after seeing the physical and mental skills of other students and they also came forward to unleash the latent power within themselves and became aware of their body and health.

❖ **Conclusions :**

In this regard, children have many latent powers, but if they are motivated through proper guidance and regularity, they can very quickly develop the right skills related to sports and can also contribute to the pride of their family, school, society or country and can make a very important contribution in building a clear society by conveying clear life lessons.

❖ **Observations :**

Some children who are unable to come forward and show their talents due to subject matter, unsuitable environment, physical weakness, or neglect in school should be given appropriate guidance and help and encouraged to come forward and show their talents in school and society.

❖ **Suggestions for future research :**

If teachers, parents and society can draw attention to the shortcomings of children, lack of talent, physical weakness, lack of proper environment, malnutrition, lack of skills, etc., and appropriate steps are taken, then the days are not far when the children of our country can achieve the achievements in the field of sports that developed countries like China, America, Russia have achieved and India's name will be written in golden letters on the world stage.

## Topic : Study of Students' Personality Traits

**Pipalava Priyanka Rashikbhai**

(Assistant Teacher)

❖ **Introduction :**

Personality traits significantly influence students' academic performance, motivation, and social behavior. These traits represent consistent patterns in thoughts, emotions, and actions that shape learning and interpersonal relationships. Understanding them helps teachers design supportive learning environments and encourage holistic student development. Key traits such as openness, conscientiousness, extraversion, agreeableness, and emotional stability define how students learn and interact.

❖ **Interpretation of Key Concepts :**

- **Students :** Individuals actively engaged in acquiring knowledge, skills, and values for personal and social development.
- **Personality :** The unique combination of behaviors, attitudes, and emotional patterns that define an individual.
